-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 04 October 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Claims 1-3, 5-7, 11-25 are pending.

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/4/04 has been entered.

***Claim Objections***

2. Claims 1, 11, 20, 21, 22, 24 are objected to because of the following informalities: In the second to last line of claim, the word "distance" should be changed to "spacing" for clarity, since "distance" would not necessarily encompass a void between the elements. The specification discloses this distance to be a space, therefore, clarity within the claim language is requested. Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 5, 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The language in claims 5 & 14, "wherein the shroud and said spoiler are formed

Art Unit: 2652

integrally with each other” is misdescriptive, because if this was the case, the “distance” as claimed in claim 1 & 11, respectively, would necessarily not exist, rendering the claim indefinite.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 17-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeshi et al (JP 7-320478). Takeshi et al discloses a disk unit (as shown in at least FIG. 1) including: a disk 1; an actuator (including elements 3, 4, 5) for supporting a head 11 that reads information from or writes information to the disk; and an airflow-regulating member 7 “for receiving and regulating airflow generated by disk rotation so as to prevent the airflow from flowing toward the actuator” (see paragraph [0019-0020]). As depicted in FIG. 1, with the airflow-regulating member 7, airflow (indicated by arrow “B” is prevented from directly contacting the pivot axis 4 and voice coil 5 of the actuator and thus suppressing needless air flow and reducing “windage loss” (see CONSTITUTION). Further, the airflow-regulating member is provided in proximity to, i.e., near, a boundary between a first area where an inner wall of a housing of the disk runs side by side with a peripheral edge of the disk and a second area where a distance between the inner wall and the peripheral edge becomes longer than in the first area (an area adjacent element numerals 12, 16 in FIG. 1); (as per claim 18) wherein said airflow-regulating member is provided in a counter-rotational direction of the disk (see direction “A” in the FIGs.) from the

Art Unit: 2652

actuator; (as per claim 19) wherein said airflow-regulating member is considered to be a "spoiler".

*Allowable Subject Matter*

7. Claims 1-3, 6-7, 11-13, 15-16, 20-25 are allowable over the prior art of record. The reasons for allowance were provided previously.

8. Claims 5, 14 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

*Conclusion*

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure including" US Patents to Voights (6,208,484) and Shimizu et al (6,369,978) which are cited to show "airflow regulating members".
